

Cladding Maintenance Protection

The exterior of many commercial, industrial and retail buildings are partially or completely cladded, with either aluminium or Steel construction panels. These Materials in turn can be painted with proven long lasting restoration coatings

Coastal Preservation Services Limited has vast experience in cladding spraying whether for Maintenance or colour change purposes.

Typical projects we undertake involve the re-imaging of large/small industrial units, warehouses and out of town retail units. The spraying of cladding can extend the life of a building by up to 30 years. We at Coastal offer any RAL and BS colours, and can help match colours if requested.

Coastal Preservation Services Ltd offers the full range of in-house services specialising in shop preparation shot/grit blasting and all types of wet coatings application, powder coating and hot applied metallization.

Services:

- Shot/Grit Blast Preparation.
